

IT ACCESS GUIDE

Can't open gjm-consultants.com at work?

If the site won't open on a corporate network, this guide gives your IT team the hostnames to allowlist and the links to request correct categorisation from the major filtering vendors.

Quick fix for IT — allowlist these hostnames

All traffic is standard HTTPS on ports 443/80. No special ports, plugins or downloads are required.

HOSTNAME	NOTES
gjm-consultants.com	Primary apex domain (HTTPS, port 443).
www.gjm-consultants.com	The www subdomain.
gjm-consultants-com.lovable.app	Hosting origin that serves the published site.

Ask the web-filter vendor to re-categorise it

If you know which filtering vendor your network uses, submit the domain for review and ask for it to be classified as Business. Re-categorisation typically takes a few days.

VENDOR	WHAT TO DO	LINK
Cisco Umbrella / Talos	Submit the domain; request "Business" categorisation.	https://talosintelligence.com/reputation_center/web_categorization
Zscaler (ZIA)	Site Review lookup, then suggest a re-categorisation.	https://sitereview.zscaler.com/
Netskope	URL Lookup, then report a mis-categorisation.	https://www.netskope.com/url-lookup
Fortinet FortiGuard	Submit a Web Filter classification rating request.	https://www.fortiguard.com/faq/wfratingssubmit
Forcepoint	Site Lookup tool, then suggest a category review.	https://support.forcepoint.com/s/site-lookup
Symantec / Broadcom WebPulse	Submit a WebPulse Site Review request.	https://sitereview.broadcom.com/

Ready-to-send note for your IT team

Copy this into an email to your IT support desk. It states what to allowlist and asks for re-categorisation as Business.

Subject: Request to allowlist gjm-consultants.com

Hello,

I am unable to reach <https://gjm-consultants.com> on our network. The site is the professional website of GJM Consultants Ltd, an executive operations consultancy (fractional and interim COO services). It is served entirely over HTTPS and contains no scripts requiring special handling.

Could you please:

1. Temporarily allowlist the following hostnames (HTTPS, ports 443/80):
 - gjm-consultants.com
 - www.gjm-consultants.com
 - gjm-consultants-com.lovable.app
2. Submit gjm-consultants.com for categorisation as "Business" through our filtering vendor's review portal.

If you can confirm once access is restored, that would be appreciated.

Thank you

Prepared by GJM Consultants Ltd (company number 17333662) as a practical guide for IT teams. The categorisation submission links point to third-party vendor portals and are subject to change. © GJM Consultants Ltd.
